70% Ethanol Antiseptic

Fractional distillation separates ethanol (78.3C) from water (100C). Required: Fermented mash, copper alembic still, condenser. Procedure: Heat mash to 80C, collect vapor, discard first 2% foreshots. Collect 80% heart fraction and dilute to 70% with distilled water. Safety: Flammable vapor.

Physiological Saline 0.9%

Isotonic concentration matches plasma osmotic pressure. Required: Pure NaCl salt, distilled water. Procedure: Dissolve 9.0g pure salt in 1000mL distilled water. Boil 20 minutes to sterilize. Safety: Must be 0.9% exact.
