Water Purification

Multi-stage bio-sand filtration removes suspended solids. Required: Coarse gravel, fine sand, activated charcoal, cloth. Procedure: Layer charcoal, sand, gravel in perforated container. Pour water, then boil for 3 minutes to sterilize pathogens. Safety: Boiling is mandatory.

Shelter & Insulation

Trapped dead air space creates insulation. Required: Ridge pole, Y-posts, ribs, leaves, vines. Procedure: Lash ridge pole between Y-posts, lean ribs at 45 degrees, thatch dry leaves 30cm thick. Safety: Avoid low riverbeds.
